DETAILED ACTION

Priority

1. Receipt of acknowledged of papers submitted under 35 U.S.C. 119 (a) – (d), which papers have placed of record in the file.

Oath/Declaration

2. Oath and declaration filed on 7/16/2003 is accepted.

Allowable Subject Matter

3. Claims 1- 6 are allowed.
4. The following is an examiner's statement of reasons for allowance: The prior art taken either singularly or in a combination fails to anticipate or fairly suggest the limitations of the independent claims, in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in independent claim 1, for example which include an operation member manually operated to instruct driving of the optical element and a signal output unit that outputs a signal that periodically according to the operation of the operation member and the controller determines the operation speed of the operation member based on the signal from the signal output unit and chooses whether to control the drive

unit according to operation speed based on a count of periodic variations of the signal from the signal output unit .

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The closest prior art

Fukita et al (US 2002/0001138 A1) discloses an optical apparatus comprises an optical member, manual operations means for manually driving the optical member and a driving motor for electrically driving the optical member and determination means for determining either manual drive by the manual operation means or electrical drive by the driving motor.

Sato et al (5,832,312) discloses a driving device includes a moveable object , a driving part for moving the object, a manual operation member , a pulse generator for generating a plurality of pulses successively according to the operation member with pulse intervals varying depending on its operation speed a data forming part for forming a plurality of data on the basis of the plurality of pulses successively according to the pulse intervals.

Imaoka et al (us 2002/0057503 A1) discloses a lens barrel includes an optical lens unit, a manual operation member for manually moving the optical lens unit in an optical axis direction and a motor member for driving the optical lens unit in the optical axis direction and a motor operation member for actuating the motor member and the motor member being arranged to output a signal relating to an operation of the motor operation member.
